GLISTENING BEAUTY, SLIP RESISTANT with suitable regular maintenance

hire, sale, refinishing service
for new work, refinishing and restoration

CRYSTALLIZATION

Latest method that produces a mirror-like surface, similar to the conventional polishing of marble at the factory. Applied with Latham Crystallization machine and chemicals.

WHO USES CRYSTALLIZATION?

Crystallization is for indoor use only and finds practical application at all levels. In professional and public buildings, malls, offices and private homes.

It should be noted that Crystallization is not the answer for pitted, scratched or crushed marble. These types of problems require grinding or sanding of the floor before Crystallization (Discuss the problem with us).

ADVANTAGES OF CRYSTALLIZATION

This treatment is based on a chemical reaction – its application must be with machines built specifically for this type of work. The machine's weight, power, heat and rotation speed are the important factors for best results. Mechanically buff on completion. To crystallize it is a **MUST** to use the genuine Crystallization machine.
