The EXBL Surface-Line Series surface mounted floor-to-wall expansion joint covers carry a brass cover plate and wall member. The series is designed to be fixed directly through the side members, normally in applications where the requirement for a recess has been overlooked. They work particularly well in carpet applications. The detail below shows a 16mm x 20mm recess in the slab, which is only required for joints less than 42mm wide. This effectively increases the width of the structural joint the system will accommodate. They would commonly be used in locations such as shopping centres, hotels, office foyers, schools, airports and other pedestrian traffic situations.
