Exterior/Interior use.

All mechanical expansion joint fixings by others.

Aluminium embedded members with aluminium cover plate.

The centering bar consists of Extra Heavy Duty elongated spherical rods fastened at opposite ends of a flat spring steel bar. The bar is positioned diagonally across the joint opening with the spheres inside the extruded cylindrical tracks. This unique concept allows for increased rotational movements and maintains constant spring tension at the centre of the cover plate. This greatly reduces the stresses on the embedded anchor sections and the surrounding concrete slabs.
